Welcome to the Forest Detectives

Forests are full of secrets. Trees grow, animals live here, and nature keeps changing. Ready to discover how forests transform?

Wildfires in the Forest

During hot, dry summers, wildfires have swept through parts of the National Park.

Dry plants catch fire fast, a spark from lightning or a careless match is enough.

Before & After Challenge

Now it's your turn to investigate! Compare these two photos of the same tree trunk.

- Photo 1: before the fire
- Photo 2: after the fire

What differences can you spot?

Why Forests Change?

Fire isn't the only thing that changes a forest, bark beetles and drought play a role too:

Bark beetles

Drought

How the Forest Comes Back

Even after damage, forests can heal. Step by step, nature works its magic!

Forests are always adapting to their environment. Change is part of their life!

Dead trees

Small trees grow back

A young forest develops

Mini Mission!

Look around you! What can you see?

Write or draw your discoveries like a real Forest Detective!
