A 2021

I am a brown tree stump in a healthy forest area. The forest is a stable ecosystem with many different plants. Tall trees form a thick canopy and provide shade. On the ground, many different grasses and bushes are growing. The forest soil is moist and contains many nutrients. Everything is lush green and in natural balance.

B 2022

Suddenly, a forest fire broke out and spread quickly. The high temperatures dried out plants and leaves, so they burned easily. Many trees were destroyed or badly damaged by the flames. There are no trees left, only tree stumps. Only a little grass is growing in some places. The soil became hard and dark due to the heat and can absorb water less well. Important nutrients in the soil were lost. The ecosystem was strongly disturbed.

B 2022

Suddenly, a forest fire broke out and spread quickly. The heat caused plants and leaves to burn. Many trees were destroyed, and only tree stumps are left. Some grass is still growing. The soil has become hard and dark and absorbs water less well.

C 2023

After the fire, the forest is strongly changed. Many trees have disappeared and only burnt tree trunks are left. The soil is dry and contains fewer nutrients. Some strong plants and flowers are slowly starting to grow again. The forest is in a recovery phase but is still unstable.

C 2023

After the fire, the forest is strongly changed. Many trees have disappeared, and only burnt trunks are left. The soil is dry and poor in nutrients. Some plants and flowers are slowly growing again. The forest is recovering but is still unstable.

D 2024

I am again the tree stump, but now black, in a recovering forest. New plants and young trees are growing from the ground. Through seeds carried by the wind, new life is forming. The soil is slowly improving through natural processes. The ground is once again fully covered with plants and everything is turning green. The forest shows its natural ability to regenerate.

D 2024

I am again the tree stump, but now black, in a recovering forest. New plants and small trees are growing. Seeds are carried by the wind and new life is forming. The soil is getting better and recovering. The ground is almost completely green again and covered with plants.
